14.	<p>Program that will construct a menu for performing arithmetic operations. The user will give two real numbers (a, b) on which the arithmetic operations will be performed and an integer</p>	***								

number ($1 \leq \text{Choice} \leq 4$) as a choice. Choice-1, 2, 3, 4 are for performing addition, subtraction, multiplication, division respectively.

If Choice-4 is selected, the program will check if **b** is nonzero.

If the check is true, the program will ask for another choice ($1 \leq \text{Case} \leq 2$), where Case-1, 2 evaluate quotient and remainder respectively. If the check is false, it will print an error message "Error: Divisor is zero" and halt.

5 10 3	Multiplication: 50
-5 10.5 4 2	Reminder: -48
-5 0 4	Error: Divisor is zero

- 15.** Program for "Guessing Game":
 Player-1 picks a number **X** and Player-2 has to guess that number within **N = 3** tries. For each wrong guess by Player-2, the program prints "Wrong, **N-1** Chance(s) Left!" If Player-2 successfully guesses the number, the program prints "Right, Player-2 wins!" and stops allowing further tries (if any left). Otherwise after the completion of **N = 3** wrong tries, the program prints "Player-1 wins!" and halts.

[**Restriction:** Without using loop/break/continue

Hint: Use flag]

Sample input (X, n1, n2, n3)	Sample output
5 12 8 5	Wrong, 2 Chance(s) Left! Wrong, 1 Chance(s) Left! Right, Player-2 wins!
100 50 100	Wrong, 2 Chance(s) Left! Right, Player-2 wins!
20 12 8 5	Wrong, 2 Chance(s) Left! Wrong, 1 Chance(s) Left! Wrong, 0 Chance(s) Left! Player-1 wins!
